tuple operation.py 2

```python
# tuple operation
t = (10,20,30,40)
print("Tuple element:",t[1]) t = (10, 20, 30, 40)

#set operations
s ={1,2,3,4}
s.add(5)
s.remove(2)
print("set:", s) s = {1, 3, 4, 5}

#Dictionary operations
student ={"name": "Amit","age": 20,"marks": 85 }

#Accessing values
print("Name:",student["name"])

#upadating values
student["marks"]=90

#adding new key
student ["city"]="Nagpur"

#Deleting key
del student["age"]

print("Updated dictionary:",student) student = {'name': 'Amit', 'marks': 90, 'city': 'Nagpur'}

#Built-in Functions
print("Dictionary keys:",Student.key())
print("Dictionary values:",student.values())
print("Dictionary iteams:",student.items())
